Abstract

Aspiring Data Scientist with a strong foundation in statistics, machine learning, and data analysis. Adept at transforming data into actionable insights using Python, SQL, and visualization tools. Seeking a challenging role in a data-driven organization to apply analytical and problem-solving skills to real-world business challenges.

Certifications

Data Structure and Algorithms **Jul 2024**

GreeksforGreeks

- **Strong understanding of core Data Structures** including arrays, linked lists, stacks, queues, hash maps, heaps, trees, graphs, and their practical applications in real-world problem-solving.
- **Proficient in implementing and analyzing Algorithms** such as searching, sorting (quick sort, merge sort, heap sort), recursion, backtracking, greedy algorithms, divide and conquer, and dynamic programming.
- **Gained hands-on experience solving algorithmic problems**, improving logical thinking and problem-solving speed through regular coding practice.

Generative AI **Apr 2024**

Coursera

- Completed a Generative AI course focused on foundational concepts and practical applications of generative models.Gained expertise in training and fine-tuning generative models for tasks such as image synthesis, text generation, and audio creation.
- Developed a strong understanding of probabilistic modeling, latent spaces, and autoregressive modeling techniques.
- Skilled in Natural Language Processing (NLP) tasks, including text generation, summarization, and language translation.

Projects

Customer Segmentation using Unsupervised Learning | *Python* **Nov 2024**

- Acquired and preprocessed customer transaction data including demographics, purchase history, and frequency of visits. Used exploratory data analysis (EDA) to identify trends, outliers, and patterns in customer behavior.
- Applied feature scaling and dimensionality reduction using Principal Component Analysis (PCA) to visualize high-dimensional data.
- Implemented KMeans clustering to group customers based on similarity in purchasing patterns.

IPL Data Visualization Dashboard | *Tableau* **Sep 2024**

- Collected and structured IPL match data across multiple seasons, including player stats, match outcomes, and venue details.
- Designed an interactive Tableau dashboard with filters for season, team, and players, allowing dynamic performance analysis.
- Created custom visualizations such as run contribution by players, team win/loss trends, and toss impact analysis. Integrated calculated fields to compute strike rates, averages, and bowling economy on the fly.

News Article Reccomender | *Python* **May 2024**

- Developed a recommendation system to suggest personalized news articles to users based on their reading history, preferences, or trending topics.
- Implemented collaborative filtering (user-based and item-based) and content-based filtering approaches.Used natural language processing (NLP) techniques like TF-IDF and Word2Vec for content similarity.
- Encorporated user-specific preferences like categories (e.g., sports, politics, tech) and browsing behavior for tailored recommendations.

Technical Skills

Languages: Python, SQL, R, CPP
Developer Tools: Jupyter Notebook, VS Code, Git, Google Colab
Data Analysis, ML:Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn.
Databases: MySQL, PostgreSQL
Soft Skills: Problem-Solving, Adaptability, Time Management, Collaboration

Extracurricular

Community Service Volunteer **Summer 2023**
NGO

- Collaborated with the NGO team to plan and execute awareness campaigns and workshops focusing on [specific cause, e.g., education, health, or hygiene].
- Collaborated with the NGO to track and report the impact of initiatives, helping improve future efforts and strategies.

Education

Lovely Professional University **2022 – 2026**
Bachelor of Computer Science *Phagwara, Punjab*
